Steve Atherton Technology

Great tool for assessing the tempo and timing of the putting stroke. Studies of PGA Tour players show there is a very defined and consistent tempo for almost EVERY great putter. The Blast sensor helps us measure your tempo as well as several other key stroke variables that can help you quickly improve your stroke.

Simple sensors that attach to points on the body for full motion measurement. Allows Steve to MEASURE how efficiently you swing, how consistently you move, and identify small swing parameters that could make significant improvements to your swing.

Your lesson reviews will now be sent as very simple video clips that you can review on your phone or on your computer. You will see yourself performing the drills EXACTLY how you did them in the lesson, hear yourself describe the precise feel you needed to improve your swing, and see the swings you made that you want to repeat. This will be a game changer for how you review your lessons and make progress!

An amazing tool that taps into your brain activity and measures how you focus. You will learn how to dial in your focus and avoid distracting thoughts when you play. After years of being able to measure the body, the ball and the club, this is one of the final frontiers in understanding human athletic behavior!!
